Purpose

This document presents all interesting findings from the tests that we conducted on Israeli toll road web site “Kvish 6”.

Our efforts focused on the primary functions of the website such as: creating and maintaining subscriptions, procedure of road payment, the process for calculating fares across various vehicle types and travel distances.

Website Overview

“Kvish 6” is the first toll road in Israel that provides fast transport communication from the north to the south of Israel. The web site of “Kvish 6” is a digital payment and registration platform for Israeli drivers. It enables users to plan and pay for various routes based on the type of vehicle.

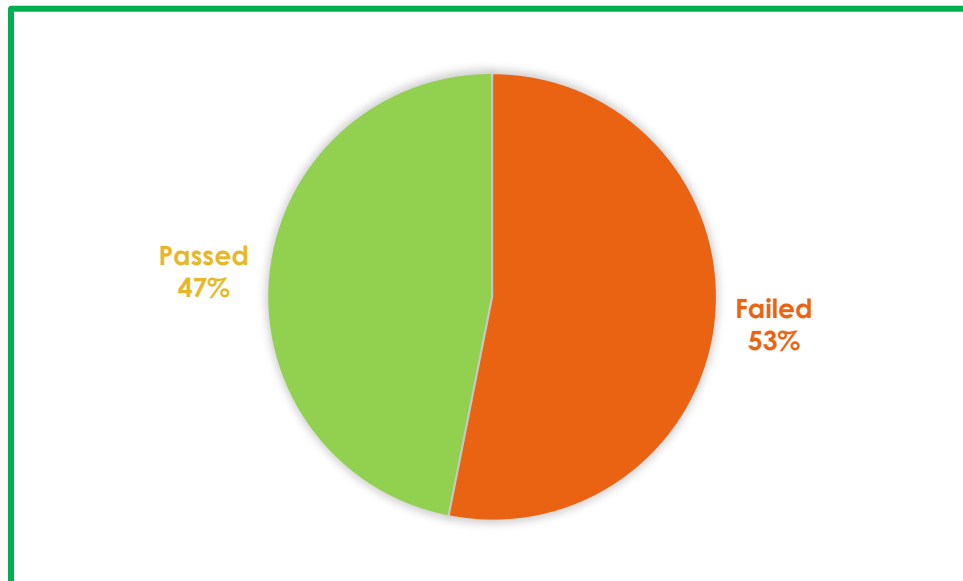

Metrics

Test cases status

This pie chart shoes the cases that were passed and failed during the project.

Most of the cases passed.

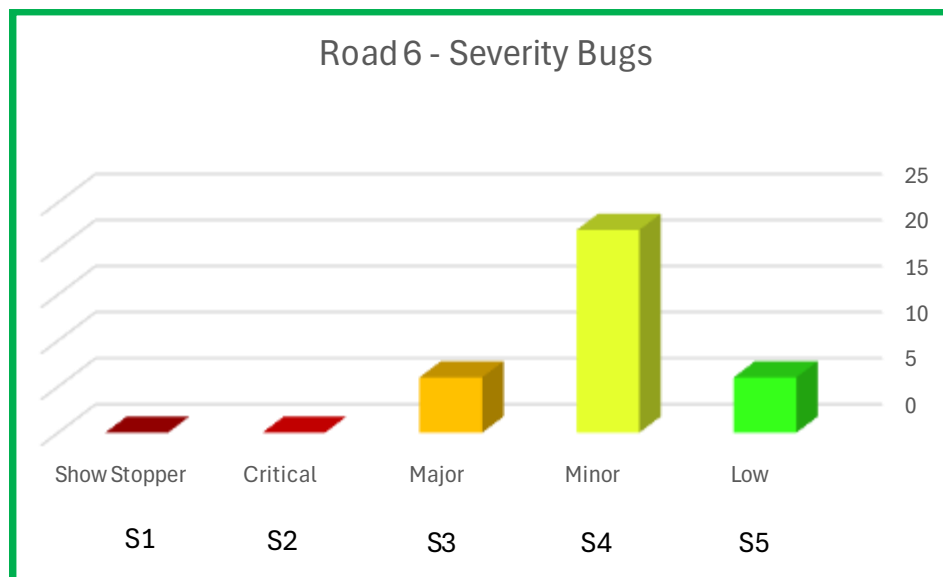

Passed	Failed	Not run	Total
40	34	0	74

Severity bug status

This column chart presents the severity status of the bugs that we found in the “Kvish 6” website. We see that most of the bugs are “Minor” severity level.

Show Stopper	Critical	Major	Minor	Low
0	0	6	22	6

Recommendation

Our main recommendations for improving the “Kvish 6” website:

1. Fixing the functionality of the message strip under the upper toolbar.
2. Ensuring that the videos are responsive to all resolutions and screen sizes.
3. Implement real-time error notifications for input fields during filling process.

Conclusion- Go

Observing all bugs that were found on “Kvish 6” website we have noticed that:

1. There are no bugs in severity showstopper and critical
2. There are only minor and low severity bugs

Therefore we strongly recommend releasing this version of the website
